

Levels of learning are alarmingly low: if younger generations don't learn, how can they contribute to the sustainable development of the continent?

(Draft version of 23/05/2018)

Key Facts

WORRISOME TRENDS IN THE LEARNING CRISIS

Since 2000, tremendous progress has been made towards the provision of greater education access across the African continent. Enrollment at primary school level rose by 75%, while lower secondary enrollment rates more than doubled¹ and public investment in the education sector is on average among the highest in the world compared to other public sectors. Despite these advances, the expectation of governments and communities that all learners would be provided with adequate skills has not been realized. Three years since the adoption of the Sustainable Development Goals (SDGs), particularly Goal 4 on Education 2030, and the African Union Continental Education Strategy for Africa (CESA) 2016-2025, the number of out-of-school children has not diminished,² nor has the number of students with basic skills increased to a satisfactory level. At 202 million, **Sub-Saharan Africa has the single largest number of children and adolescents who are not learning.**³ According to the UNESCO Institute for Statistics (UIS), if current trends continue, nearly 9 out of 10 children between the ages of approximately 6 and 14 will not meet minimum proficiency levels in reading and mathematics.⁴

Available data shows Africa's learning crisis is widespread (see table 3 in annex). At the end of the primary cycle, less than half of enrolled students acquire minimum skills in reading (44% of female and 42% of male learners) and mathematics (40% of female and 42% of male learners).⁵

Girls, children and adolescents living in poverty or remote and rural areas and those who do not speak the language of instruction at home face the greatest disadvantage. According to the latest estimates 70 million, or 90% of girls will not achieve minimum proficiency levels in reading, compared to 85% of boys.⁶

INSUFFICIENT DATA ON LEARNING

Data production and dissemination still represent a huge challenge in Africa (see annex). Although 60% of African countries collect data on learning outcomes, according to the UIS database for monitoring of SDG4 progress, only 19% of the countries report data on student proficiency in reading and mathematics at the primary education level.⁷ The situation is even worse at secondary level where only 4% of countries report data on student proficiency in mathematics and 11% on student proficiency in reading.

LEARNING ASSESSMENT SYSTEMS ARE OFTEN TOO WEAK TO INFORM LEARNING IMPROVEMENT POLICIES

In those countries where learning outcomes are measured, **data is often underutilized** in the development and improvement of education policies.⁸ Learning assessments tend to be conducted as stand-alone activities with a relatively loose link to the overall sector policy and planning process. Recent data from the Global Partnership for Education,⁹ confirm that only 34% of their 38 Development Country Partners¹⁰ in the sub-Saharan Africa region are deemed to have an established learning assessment system, namely, a group of policies, structures and tools designed for generating as well as using information on student learning and achievements.¹¹

MORE TRAINED TEACHERS ARE NEEDED TO ENABLE LEARNING

A shortage of trained teachers, together with poor management of the teacher work force, represent a significant challenge to learning.¹² African countries made significant progress in the supply of teachers over the past decades, often through measures to recruit teachers with little or no training. However, 70% of countries in the region are still facing an acute shortage of trained teachers at the primary education level, rising to 90% at the secondary level. Most recent estimates from the UIS show that to fill this gap, and achieve universal quality primary and secondary education, **17 million trained teachers are needed** in sub-Saharan Africa by 2030.¹³

OUT-OF-SCHOOL CHILDREN ARE DENIED ANY LEARNING OPPORTUNITIES

Of the 63 million primary school age children deemed out-of-school at a global level, more than half (34 million) live in Sub-Saharan Africa. At a continental level, the Adjusted Net Enrollment Ratio for primary education is 80, thus 1 out of every 5 primary school aged child is still not enrolled in school.¹⁴ More than **20% of primary school aged children in Sub-Saharan Africa are currently denied the right to education**, thus threatening their own and Africa's future.¹⁵ If these figures are added to those of many children and adolescents who do not learn enough in school, it is clear that the learning situation in Africa warrants urgent action; all the more so as the continent's high demographic growth will increase the demand for quality education: according to estimates, Africa will see a 33% increase in the primary-school-age population by 2030.¹⁶ With the advancement of new technologies and the changing labor-market, citizens who are not able to read, write, count or who do not possess relevant transferable skills will be left at the margins of society and the economy. Investment in learning has multiple benefits, among them a positive impact on social cohesion, peace and sustainable development.

Remember our Commitments!

With the adoption of SDG4, UN member states and partner organizations have agreed to ensure, inclusive and equitable quality education and promote lifelong learning opportunities for all by 2030. Building on the unfinished agendas of the Millennium Development Goals and Education for All, **quality education and learning are at the very core of both SDG4 and CESA 16-25** (see box 1). Five of the seven SDG4 targets are specifically designed with the intention of addressing the global learning crisis. Moreover, CESA 16-25 specifically calls on AU member states to address issues of quality and equity in education, particularly at the pre-primary level, a neglected area in terms of investment and policy, and at the primary level where

geographical disparities are still leaving behind girls and women, the most marginalized, the poorest and those living in remote areas. The next question is whether these international commitments have been translated into national policies and strategies that can address the alarmingly low levels of learning.

It's Time to Take Effective Action: Key Messages to Decision-makers

- **Redefine the role of assessment, and monitor cognitive as well as non-cognitive skills acquisition:** Governments need to revise the concept of assessment from “assessment of learning” to “assessment for learning.” Countries where there is no established learning assessment system need to strengthen existing policies by learning from the experiences of other countries. This will require additional resources to increase capacity of teachers and ministry officials to administer the assessments, develop appropriate tools to measure all skills included in national curriculum, including 21st century skills (e.g. non-cognitive skills) and better use assessment data. The return on investment will be higher than investing in education that does not fulfill its mission.
- **Promote the use of learning data:** Policy-makers should regularly collect disaggregated data on learning outcomes to understand whether learners are acquiring a skill or not and to identify students facing challenges.¹⁷ This data should adequately support the design and implementation of effective evidence-based education interventions and remedial actions and ensure accountability to citizens.
- **Invest in early learning and increase the rate of young children achieving minimum proficiency level in early grades:** It is essential that governments identify whether children learn (in formal, non-formal or informal settings) during early childhood and whether they are ready to continue learning in subsequent cycles. Ensuring that children acquire basic skills in early childhood will increase learners' chances of acquiring later skills at school, in employment, in family life and in parenting.¹⁸ This is one of the best investments a government can make in the medium and long term for the country and for its citizens. According to the latest estimates, every \$1 spent on early childhood education can lead to a return of as much as \$17 for the most disadvantaged child.¹⁹
- **Promote teaching in the mother tongue, especially in the early years of education.** National education policies should recognize the importance of teaching children in the language they speak at home. From a pedagogical perspective, teaching in the mother tongue is critical to ensure that learners acquire foundational skills in literacy, numeracy and other competencies.
- **Ensure quality teaching and promote the professionalization of teachers.** Teaching is the most important driver of learning. Therefore, quality teaching is a precondition for increasing students' chances of acquiring basic skills. Despite the efforts made in the

past decade, the issues of teacher qualification and professional support still need to be resolved in most African countries. Moreover, quality teachers need robust training in assessment to enable them to identify learning difficulties and design corrective measures for those children lagging behind in the learning process. The development of professional standards for teachers and supervisors, which clarify the professional knowledge, skills and attitudes expected of them, and the alignment of teacher training (initial and in-service) and certification with these standards, are necessary steps in this direction.

- **Ensure the provision of multiple and flexible learning pathways and entry points at all ages and all education levels:** Alternative learning pathways are essential to ensure the right to education for all those who do not have access to formal education or who leave it prematurely. The establishment of validation and recognition processes for skills acquired through non-formal and informal education is also a necessity that encourages further learning.

Box 1: Learning is at the core of SDG4 and CESA 16-25

SDG 4	CESA 16-25
<p>5 of the 7 targets under SDG 4 call for effective and relevant learning outcomes:</p> <p><u>Target 4.1:</u> Relevant and effective learning outcomes in primary and secondary education <u>Target 4.2:</u> Readiness for primary education <u>Target 4.4:</u> Technical and vocational skills for employment, decent jobs and entrepreneurship <u>Target 4.6:</u> Youth and adult literacy and numeracy <u>Target 4.7:</u> Skills for global citizenship and sustainable development</p> <p>2 of the 3 additional targets related to the means of implementation of SDG 4 also refer to the outcomes and consequences of educational processes:</p> <p><u>Target 4.a:</u> Safe and inclusive learning environments <u>Target 4.c:</u> Teacher training and working conditions</p>	<p>10 of the 12 CESA strategic objectives (SO) are developed around learning:</p> <p><u>SO 1:</u> Revitalize the teaching profession to ensure quality and relevance at all levels of education <u>SO 2:</u> Ensure a permanent, healthy and conducive learning environment <u>SO 3:</u> Harness the capacity of ICT to improve access, quality and management of education and training systems <u>SO 4:</u> Ensure acquisition of requisite knowledge and skills <u>SO 5:</u> Ensure that girls (and boys as appropriate) enroll, stay and achieve in schools <u>SO 6:</u> Launch comprehensive and effective literacy programmes across the continent to eradicate the scourge of illiteracy <u>SO 7:</u> Strengthen the science and math curricula in youth training and disseminate scientific knowledge and culture in society <u>SO 8:</u> Identify skills and competencies needed for employment and promote entrepreneurship and innovation <u>SO 9:</u> Revitalize and expand tertiary education, research and innovation <u>SO 10:</u> Promote peace education and conflict prevention and resolution at all levels of education and for all age groups</p>

Annex : Missing Data on Learning (and Teaching)

Explanatory Note: In the following tables all missing data is highlighted in orange. The source of data is the UNESCO/UIS eAtlas for Education 2030, the official database to monitor country level progress towards the achievement of the SDG4²⁰ or the UNESCO/UIS eAtlas for Out-of-school children²¹. Data are for the most recent year available in the period specified. For details, see relevant sources.

- ²³ Teacher who has fulfilled at least the minimum organized teacher-training requirements (pre-service or in-service) to teach a specific level of education according to the relevant national policy or law. Source: <http://glossary.uis.unesco.org/glossary/map/terms/176>;

This brief was developed by

With the support of all the members of the Steering Committee

TALENT is designed to serve as a thematic platform to support the implementation of the Framework for Action of the Sustainable Development Goal 4 on Education by 2030. TALENT has been one of the task teams of the Regional Coordination Group on SDG4-Education 2030 in West and Central Africa since June 2016.

For more information on TALENT's activities or to comment on this note, please contact:
